# DISABLING THE RIGHTCLICKMENU

Just got a question on how to disable the right click menu (since it can be pretty annoying when developing). First of all, if you just want to momentarily disable it just hold down CTRL while right-clicking or select "Disable" from the Right Click Menu.

Alternatively, you can disable it from admin mode. The Right Click Menu is a Page Extension to EPiServer and it's quite easy to go to the Plugin Manager in Admin mode, select the "EPiServer" assembly and from it's overview uncheck the "Context Menu" and then select "Save".
