GETTING A PAGE FROM A GUID

Here's just a quick little code-hint. Sometimes it can be handy to retrieve a pagereference or a pagedata object from a guid. And it's easily done using the PermanentLinkMapStore.

See here:

```
PermanentPageLinkMap map = PermanentLinkMapStore.Find(PageGuid) as PermanentPageLinkMap;  
return (map != null) ? map.PageReference : PageReference.EmptyReference;
```
