Optimizely (EpiServer) AI .NET Development

AI GENERATED OPTIMIZEZY DEVELOPER NEWSLETTER

Updates in the Optimizely ecosystem are everywhere: blog posts, forums, release notes, NuGet packages, and documentation changes. This newsletter brings the important ones together in one place.

Keeping up with the Optimizely ecosystem can be surprisingly difficult. Important updates appear across blog posts, forums, release notes, NuGet packages, documentation updates, and community discussions. Even if you follow a lot of sources, it's easy to feel like you've missed something important.

To make this easier, we built a new Optimizely Developer Newsletter at CodeArt.

Each week, our AI scans a wide range of sources across the ecosystem – including blog posts, forums, NuGet feeds, release notes, and official documentation. It filters the noise, summarizes the key updates, and compiles them into a short weekly overview.

The goal is simple: make it easier for developers to stay informed without spending time hunting for updates across dozens of different places.

If you work with Optimizely and want a quick overview of what's new each week, you can subscribe here and see some of the recent newsletters.
