MAPPEDPAGEPROVIDER, DYNAMIC CONTENT PLUGIN & VIRTUAL ROLES PACK - NOW ON CODEPLEX

I finally found a moment to move the code for some of the more used blog posts to Codeplex, where they are being shared as open source under the LGPL License.

- The Mapped Page Provider, that makes it easier to create new page providers to existing data
- The Dynamic Content Plugin, that allows you to turn user controls into Dynamic Content, handles the state, and allows you to register Dynamic
- The Role Based Content and the Virtual Roles Sample Pack, that helps you personalize a site based on roles

I appreciate all the feedback I have received on these projects and hope they will come in handy in the future as well. If you want to participate in the coding efforts on them, just sign up on Codeplex and send me a note that you want to contribute.

Also, I recently moved my QuickWatch Gadget for the Gadget Contest to Codeplex.

Enjoy!
